

Application Links Documentation

About Application Links

Application Links (AppLinks) is a plugin that allows you to link your [JIRA](#), [Confluence](#), [FishEye](#), [Crucible](#), [Bamboo](#) and [Subversion](#) applications. You can even link your individual projects, spaces and repositories with each other, across the different applications. Applications Links is bundled with FishEye 2.4, Confluence 3.5, JIRA 4.3, and all later versions of those applications.

Linking two applications allows you to share information and access one application's functions from within the other. For example, if you link JIRA and Confluence, you can view JIRA issues on a Confluence page via the [JIRA Issues Macro](#).

Getting Started

The [Quick Start Guide](#) provides instructions on how to set up the most common application link configuration.

Administrator's Guide

The administrator's guide is for administrators who want to configure application links for the applications. The guide contains information on [adding a new application link](#), [configuring the authentication](#) for an application link, [setting up project links](#) and more.

Developer Resources

These resources are for developers who want to develop with the Application Links plugin. Take a look at the [Development Hub](#).
