

Wallboard

A *wallboard* is a type of information radiator that displays vital data about the progress of the development team. Similar to a scoreboard at a sporting event, wallboards are large, highly visible and easily understood by anyone walking by.

Traditional wallboards are made of paper or use sticky notes on a wall. Electronic wallboards are very effective since they update automatically with real-time data, ensuring that people check back regularly.

If you have installed the [JIRA Wallboards Plugin](#), you can display a [JIRA dashboard](#) as a wallboard. See the [GreenHopper 101](#) for a quick guide to displaying a GreenHopper-specific wallboard.
